Art Unit: 1773

1. The following is an examiner's statement of reasons for allowance: Schwing et al (USPN 5,656,335) teaches a process for coating a substrate with a metal material giving a polished effect wherein the process includes cleaning the substrate 10 and forming a polymer base coating 12 on the substrate by burning on a powdered lacquer, coating the coated substrate with a metal 14 such as aluminum giving a polished effect by plasma deposition or sputtering within a vacuum chamber, and applying a transparent top coating 16 on the metallized layer by burning on a powdered lacquer, wherein the coated substrate may contain an optional intermediate protective coating between the metallized layer and the top coating layer; as well as an optional final scratch-proof protective coating on the top coating layer; and wherein the substrate may be a metal and the shaped body or substrate can be cleaned and degreased so that it can be subjected to conversion treatment followed by drying prior to applying the base coating. Schwing et al do not teach or render obvious the incorporation of an inorganic corrosion inhibiting conversion coating layer on the sputtered metal layer as instantly claimed in Claim 19 or the layered structure as instantly claimed in Claim 25.
